

Trolleys

GGR Tilting Trolley [400/800kg]

The GGR Tilting Trolley is a powered handling solution designed for transporting and positioning large glass sheets and panels. Its adjustable bed tilts from 22° to 90°, allowing loads to be moved between inclined and vertical positions with controlled remote operation.

Each trolley has a 400kg safe working load and can be connected to a second unit to create an 800kg twin-trolley system for larger panels. When paired, both trolleys operate synchronously from a single control box and remote.

Braked castors provide controlled manoeuvrability across level surfaces, while the timber supports help protect and stabilise the load. Compact and versatile, the GGR Tilting Trolley is ideal for glazing and panel-handling applications where precise positioning, restricted-access movement and safer load transfer are required.

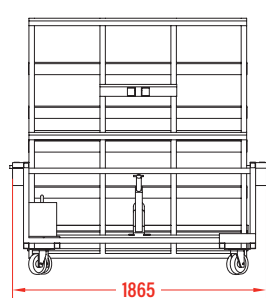

Key Features

- 400kg safe working load per trolley
- 800kg capacity when two trolleys are connected
- Powered tilting range from 22° to 90°
- Synchronised twin-trolley operation
- Weight: approx. 200kg per trolley
- Optional upper bed extension

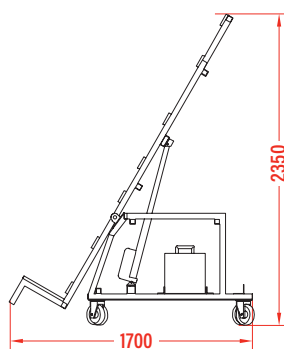

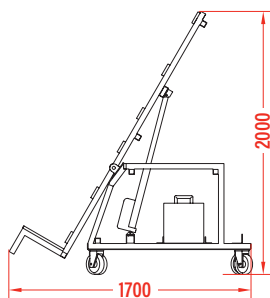

Reference Code
AGT89
